

## 1.0 - accessRelyingPartyService() : (Customer ==> Relying Party)

### Description:

Customer Requesting to Access Relying Service.

## 1.1 - www\_authorise() : (Relying Party ==> ISAM WebSeal)

### Description: OIDC

Relying party issues an authorize request with the appropriate scope and claims

### Request:

https://<<idhub>>/authorize?response\_type=code&client\_id=rp&scope=openid profile email phone  
tdif business authorisations&redirect\_uri=<<hostname>>/rp/exchange&nonce=<<nonce>>&state=<<state>>&ac  
r\_values=urn:id.gov.au:tdif:acr:ip2:cl2&claims={"id\_token":{"mygov\_linked":{"essential":true}}, "useri  
nfo":{"mygov\_linked":{"essential":true}}}

### Response:

HTTP/1.1 200 OK

## 1.2 - loadExchangeSPA() : (ISAM WebSeal ==> WebServer)

### Description:

Load Exchange SPA page

## 1.3 - generateAndStoreRPAuthID() () : (Exchange SPA ==> SPA Session Storage)

### Description: Function

Generate **RP\_AUTH\_ID** and store it in the session storage

## 1.4 - checkSessionStorage() : (Exchange SPA ==> SPA Session Storage)

### Description: Function

Check if **ISAM\_SSO\_JWT** exists in the session storage.

## 1.5 - checkLocalStorage() : (Exchange SPA ==> SPA Local Storage)

### Description: Function

Check if **ISAM\_SSO\_JWT** exists in the local storage.

## 1.6 - getIDPAuthUserInfo() : (Exchange SPA ==> EXT-Customer API)

### Description: API

Retrieve IDP Auth User Information

### Security:

Bearer-Token: **ISAM\_LEVEL3\_JWT**

### Request:

**GET:** <<idhub>>/api-ext-customer-ui/v1/idpauthentications/<<idp\_auth\_id>>/<<rp\_auth\_id>>/userinfo

### Response:

HTTP/1.1 200 OK

### BODY:

{"idpAuthId": "<<idp\_auth\_id>>", "sessionId": "<<session\_id>>", "claims": [{"claims"}]}

## 1.7 - getRPDetails() : (Exchange SPA ==> EXT-Customer API)

### Description: API

Retrieve details for a given relying party

### Security:

Bearer-Token: **ISAM\_LEVEL3\_JWT**

### Request:

**GET:** <<idhub>>/api-ext-customer-ui/v1/relyingparty/7

### Response:

HTTP/1.1 200 OK

### BODY:

```
{"id": "rp_biz_client",  
  "name": "DSS GRS",  
  "description": "Dept Social Services Grants Registration System",  
  "properties": {"displayName": "Grants Registration Portal",  
  "serviceName": "Grants Registration Portal"}
```

## 1.8 - confirmmyGovConnection() : (Exchange SPA ==> Exchange Connector)

### Description: Internal API

Verify and confirm if a link exists between myGov and Exchange for the given user

## 1.9 - getExchangeLink(reylyingParty) : (Exchange Connector ==> Exchange Application Server)

### Description: API

Verify if myGov is linked to Exchange

## 1.10 - verifyAccount() : (Exchange Connector ==> myGov Integration)

### Description: API

Verify if the linked account for the given MBUN or EMAIL is active and return the corresponding matching attribute.

### Security:

Bearer-Token: **EXCHANGE\_MYGOV\_JWT**

### Request:

**GET:** /authenticator/verify

**Response:**

HTTP/1.1 200 OK

**BODY:**

```
{"email":"<<email>>"} // if MBUN is passed as the subject
{"MBUN":"<<mbun>>"} // if EMAIL is passed as the subject
```

**1.11 - promptForConsent() : (Exchange Connector ==> Exchange SPA)**

Redirect to SPA to display the consent page to obtain user's consent for myGov auto-account creation and sharing details with myGov

**1.12 - customerConsents() : (Customer ==> Exchange SPA)**

**Description: User Action**

Customer provides the consent to share details to myGov

**1.13 - storeRPCConsent() : (Exchange SPA ==> EXT-Customer API)**

**Description: API**

Store Relying Party Consent

**Security:**

Bearer-Token: **ISAM\_LEVEL3\_JWT**

**Request:**

**PUT:** <<idhub>>/api-ext-customer-ui/v1/rpauthentications/<<rp\_auth\_id>>/consent

**BODY:**

```
{"id":"<<rp_auth_id>>",
 "claimConsents":[],
 "abn":"83134235310",
 "triggerScope":"<<triggerScope>>"}
```

**Response:**

HTTP/1.1 201 Created

**1.14 - confirmmyGovConnection() : (Exchange SPA ==> Exchange Connector)**

**Description: Internal API**

Verify and confirm if a link exists between myGov and Exchange for the given user

**1.15 - getmyGovAccountLinks() : (Exchange Connector ==> myGov Integration)**

**Description: API**

Verify if a link exists between myGov and the Relying Party (e.g. Exchange)

**Security:**

Bearer-Token: **EXCHANGE\_MYGOV\_JWT**

**Request:**

**GET:** /accounts/links

**PARAM:** relyingPartyId

**Response:**

HTTP/1.1 200 OK

**BODY:** RelyingPartyLink object

```
{
  "relyingPartyId": "ATO|EXCHGE|...",
  "relyingPartyName": "Australian Taxation Office|myGov Identity Hub|...",
  "relyingPartyLinkDetails": {
    "id": "<<id>>",
    "status": "permanent|transient",
    "created": "<<created>>",
    "lastModified": "<<lastModified>>"
  }
}
```

**1.16 - generateLink(relyingParty) : (Exchange Connector ==> Exchange Application Server)**

Generate myGov link in Exchange

**1.17 - createmyGovAccount() : (Exchange Connector ==> myGov Integration)**

**Description: API**

Create a new myGov account for the User in the myGov system

**Security:**

Bearer-Token: **EXCHANGE\_MYGOV\_JWT**

**Request:**

**POST (Create):** /accounts/

**BODY:** myGovAccount object

```
{ "myGovAccount ": "<<myGovAccount>>"}
```

**Response:**

HTTP/1.1 201: Successfully created

### 1.18 - createUpdateProfile() : (Exchange Connector ==> myGov Integration)

#### Description: API

Create or Update User's myGov profile in myGov

#### Security:

Bearer-Token: **EXCHANGE\_MYGOV\_JWT**

#### Request:

**POST (Create):** /accounts/profile

**PUT (Update):** /accounts/profile

#### BODY: myGov Profile

```
{ "name": {  
  "firstName": "string",  
  "middleName": "string",  
  "lastName": "string"  
},  
  "dateOfBirth": "2019-11-05"  
}
```

#### Response:

HTTP/1.1 204 Successfully Created or Updated

### 1.19 - createUpdateLink(rpLinkID) : (Exchange Connector ==> myGov Integration)

#### Description: API

Create a new myGov Relying Party Account Link / MBUN in the myGov system for a given relying party. The user account will be specified by the use of the "sub", "squ" and "sty" claims of the mgv-jwt JWT header

#### Security:

Bearer-Token: **EXCHANGE\_MYGOV\_JWT**

#### Request:

**POST (Create):** /accounts/links/

#### BODY: RelyingPartyLink object

```
{  
  "relyingPartyId": "ATO|EXCHGE|...",  
  "relyingPartyName": "Australian Taxation Office",  
  "relyingPartyLinkDetails": {  
    "id": "<<id>>",  
    "status": "permanent|transient",  
    "created": "<<created>>",  
    "lastModified": "<<lastModified>>"  
  }  
}
```

#### Response:

HTTP/1.1 201 Relying party link successfully created

### 1.20 - promptForConsent() : (Exchange Connector ==> Exchange SPA)

Redirect to SPA to display the consent page

### 1.21 - customerConsents() : (Customer ==> Exchange SPA)

#### Description: User Action

Customer provides the consent to share details to the relying party

### 1.22 - storeRPConsent() : (Exchange SPA ==> EXT-Customer API)

#### Description: API

Store Relying Party Consent

#### Security:

Bearer-Token: **ISAM\_LEVEL3\_JWT**

#### Request:

**PUT:** <<idhub>>/api-ext-customer-ui/v1/rpauthentications/<<rp\_auth\_id>>/consent

#### BODY:

```
{ "id": "<<rp_auth_id>>",  
  "claimConsents": [],  
  "abn": "83134235310",  
  "triggerScope": <<triggerScope>> }
```

#### Response:

HTTP/1.1 201 Created

### 1.23 - getRPFfinalisedAuthRequest() : (Exchange SPA ==> EXT-Customer API)

#### Description: API

Retrieve Relying Party Finalised Auth Request

**Security:** **ISAM\_LEVEL3\_JWT**

#### Request:

**GET:** <<idhub>>/api-ext-customer-ui/v1/rpauthentications/<<rp\_auth\_id>>/finalised

**Response:**  
HTTP/1.1 200 OK

**BODY:**  
{  
 "rpAuthId": "<<rp\_auth\_id>>",  
 "fullURL": "<<fullURL>>",  
 "sessionId": "<<session\_id>>"  
}

#### 1.24 - kickOffRPAuthorizeFlow() : (Exchange SPA ==> ISAM AAC)

**Description:** API

Invoke this API to kickoff the RP Authorise flow

**Security:**

Bearer-Token: ISAM\_LEVEL3\_JWT

**Request:**

**POST:**

<<idhub>>/sso/sps/oauth/oauth20/authorize?response\_type=code&client\_id=rp\_biz\_client&scope=<,scope>&redirect\_uri=<<redirect\_uri>>&state=<,state>&acr\_values=<<acr\_values>>&prompt=none

**Response:**

{"location": "https://<<idhub>>/proto-rp/exchange?state=<<state>>&code=<<code>>"}

#### 1.25 - confirmRPConnection() : (Exchange SPA ==> Exchange Connector)

**Description:** Internal API

Verify and confirm if a link exists between the Relying Party and Exchange for the given user

#### 1.26 - getExchangeLink(relyingParty) : (Exchange Connector ==> Exchange Application Server)

**Description:** API

Verify if the RP link exists in Exchange

#### 1.27 - getmyGovAccountLinks() : (Exchange Connector ==> myGov Integration)

**Description:** API

Verify if a link exists between myGov and the Relying Party (e.g. Exchange)

**Security:**

Bearer-Token: EXCHANGE\_MYGOV\_JWT

**Request:**

**GET:** /accounts/links

**PARAM:** relyingPartyId

**Response:**

HTTP/1.1 200 OK

**BODY:** RelyingPartyLink object

```
{  
  "relyingPartyId": "ATO|EXCHGE|...",  
  "relyingPartyName": "Australian Taxation Office|myGov Identity Hub|...",  
  "relyingPartyLinkDetails": {  
    "id": "<<id>>",  
    "status": "permanent|transient",  
    "created": "<<created>>",  
    "lastModified": "<<lastModified>>"  
  }  
}
```

#### 1.28 - generateLink(relyingParty) : (Exchange Connector ==> Exchange Application Server)

Generate relying party pairwise identifier in Exchange

#### 1.29 - createUpdateLink(rpLinkId) : (Exchange Connector ==> myGov Integration)

**Description:** API

Create a new myGov Relying Party Account Link / MBUN in the myGov system for a given relying party. The user account will be specified by the use of the "sub", "squ" and "sty" claims of the mgv-jwt JWT header

**Security:**

Bearer-Token: EXCHANGE\_MYGOV\_JWT

**Request:**

**POST (Create):** /accounts/links/

**BODY:** RelyingPartyLink object

```
{  
  "relyingPartyId": "ATO|EXCHGE|...",  
  "relyingPartyName": "Australian Taxation Office",  
  "relyingPartyLinkDetails": {  
    "id": "<<id>>",
```

```
"status": "permanent|transient",  
"created": "<<created>>",  
"lastModified": "<<lastModified>>"  
}  
}
```

**Response:**

HTTP/1.1 201 Relying party link successfully created

**1.30 - tdiffRPAuthoriseResponse() : (ISAM AAC ==> Relying Party)**

Send an authorized response back to the Relying Party along with the RP claims
